

Altosoft for System Center

OPERATIONAL DASHBOARDS & REPORTS FOR IT OPERATIONS

Altosoft brings global visibility to IT operations. The Insight Dashboard for System Center provides a comprehensive view of your System Center operations while providing an easy-to-use and highly interactive tool for monitoring and managing your IT infrastructure. Altosoft provides the power to gain control over IT operational complexities while making it easy and accessible for a broad range of users. Never before has the richness of System Center been so easy to manage.

The Insight Dashboard for System Center is designed to provide you with immediate and flexible access to the full range of System Center operational data. The Insight dashboard provides immediate access to the “vital statistics” of your IT operation. With Insight you can monitor not only System Center data - you can also incorporate data from any operational business system to provide the critical context necessary for you to understand how the current operating state impacts the business operations of your organization.

Altosoft also extends System Center with the ability to monitor and report on any aspect of System Center managed resources as well as any other enterprise system. The result is superior insight into IT operational performance that increases operational responsiveness, ensures consistent SLA execution and creates new opportunities for performance improvement.

MONITOR, ANALYZE, AND REPORT

Altosoft for System Center enables rapid development and deployment of powerful, interactive capabilities for monitoring and reporting on Microsoft System Center.

- Interactive, personalized dashboards track and analyze real-time and historical activity within the System Center environment. Users can quickly visualize, drill down, explore, and analyze any System Center-related information. Visibility into real-time operational activity benefits from the context of fully integrated historical information.
- Scorecards allow organizations to benchmark their performance versus goals or history.
- Easy-to use, self service reporting enables users to build, publish, and share their own reports directly in a browser, with no coding required.
- Real-time performance allows users to track in-flight processes as they transpire.
- Customers can quickly set automated alerts to notify them when critical conditions or exceptions occur inside – or even outside – of System Center, and “close the loop” by managing them to resolution using System Center’s tools.
- Solution development and deployment requires zero code or script, and typically takes just a few days. Changes and enhancements are easy.

BUSINESS SERVICE MANAGEMENT (BSM) FOR SYSTEM CENTER

Altosoft’s power to integrate System Center data with operational business systems allows you to achieve true BSM capabilities using System Center tools. Through the seamless integration of IT and business data you can quickly see the direct business impact of your IT operation on the real-time business operations.

Altosoft brings detailed and customizable operational dashboards to System Center that allow immediate insight into IT operations

- *Highly Interactive dashboards and reports that allow you to drill down into your data using intuitive interactive dashboard components*
- *Historical operating data integrated to allow for continuous assessment of improvement goals*
- *No coding required to extend dashboards to include data from other data sources*
- *Integrated incident management to notify you of critical conditions based on any system or data source*
- *Supports hybrid deployments for mixed use of on-premise and cloud resources (runs on Azure or Amazon EC2)*
- *Flexible deployment options allow you to choose between Insight, SharePoint or System Center Operations Manager and mix and match based on specific user preferences*

Altosoft for System Center

EXTEND BEYOND SYSTEM CENTER

Altosoft extends beyond the System Center environment to enable monitoring and analysis of any IT system.

- IT operations and business activity in any non-System Center managed systems (ERP, CRM, etc.) can be viewed and analyzed together with System Center in the same dashboards and reports, enabling a cross-system view of enterprise performance.
- Metrics generated by Altosoft based on activity in third party systems can be fed directly into System Center or Opalis. Using this data System Center and Opalis can then in turn be used to optimize reaction to those events as they occur – closing the loop to optimize operational IT performance.
- Data from System Center and these third party systems can be easily joined to create composite metrics that accurately measure SLA compliance and other key performance indicators.
- New data sources can be added in minutes. Metrics combining data from multiple sources do not require development and management of an independent data warehouse or mart.

BRIDGE THE GAP WITH IT PROCESS AUTOMATION

As the official dashboard for the Opalis IT process automation suite Altosoft also offers a seamless view into process execution data coming from the Opalis environment. With this linkage you have a single view of your entire operational computing infrastructure which can be monitored and managed using any combination of traditional IT activities, automated IT processes and operational business data.

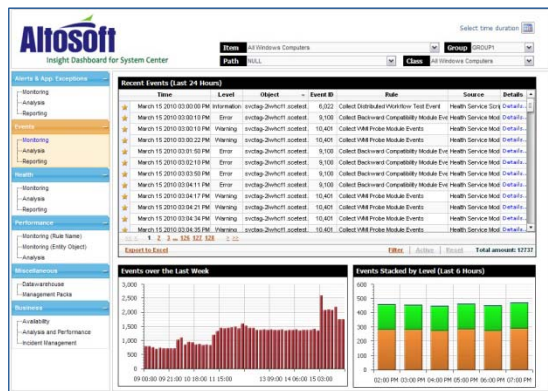

- Altosoft's unique business process intelligence engine monitors any automated IT or business process, even if they unfold across multiple operational systems (System Center, Opalis, ERP, databases, proprietary systems, etc.).
- Users can analyze general process performance or even drill down to monitor individual process instances. The result is a global, process-centric understanding of your IT and business activity.

About Altosoft

At Altosoft, we make BI work. Altosoft's process-aware solutions eliminate the cost and complexity of conventional BI while delivering advanced functionality for operational performance improvement. Altosoft delivers the three critical enablers needed to transform existing business intelligence into a powerful, flexible engine of competitive advantage. First, Altosoft's business process intelligence capability adds essential process monitoring and analysis capability. Second, Altosoft provides agile data integration that makes the hardest part of BI easy by gathering data from various sources and converting dynamically it to KPI metrics. Finally, Altosoft facilitates rapid, reliable BI solution development with guided, code-free configuration and data governance features.
